

INNOVATION TO PROMOTE AN INDEPENDENT LIFE

PRESENTATION

Cluster SIVI is an innovative, strategic and synergistic grouping, made up of entities representing the different links in the value chain in provision of socio-health services to disabled or handicapped dependant people:

- Public administrations
- Technology hubs and universities
- Tech companies
- Services providers and final user representatives

Its goal is to improve the dependants' quality of life by applying innovative solutions with a high technological component, stimulating and promoting the sector's competitiveness.

It is Spain's only cluster devoted to the health sector and directly oriented to social services, dependency and care. It aims to deploy the great potential of person-centered technology, thereby contributing to the social and economic development of its territory (Europe's largest region, Castilla y León).

SIVI works to make new and better services available and supported by a digital transformation process that complements and facilitates professional care.

GOALS

- Promote business innovation and transferring technology to develop sustainable socio-sanitary solutions
- Improve qualification and professionalization in the sector in order to increase its competitiveness
- Increase the purchase of innovative technology
- Promote consolidation and inter-company collaboration in a regional, national and international field of excellence
- Promote the cluster and its members internationally

BENEFICIARIES
